ANALYSIS OF SPECIFIC FEATURES OF SONG FOLKLORE IN POLTAVA REGION. AN ATTEMPT TO GENERALIZE

Summary. The article analyzes the scientific works of domestic researchers of folklore of Poltava region. The author systematizes the list of historical references to ritual and non-ritual folklore by chronological and geographical features. The genres of song folklore in the female, male and children’s repertoire with justification of specific performance characteristics in the region are distinguished. The types of text invoice presentation of many-voice songs and the peculiarities of singing one-voice songs are analyzed.

Keywords: Poltava region, ritual folklore, non–ritual folklore, performance, specificity.

F ormatIon of the problem. Poltava region belongs to the Dnieper part of Ukraine, which is considered by such scientists as A. Ivanytskyi [4], O. Murzina [5], O. Bench [6] – a center of national type of folk performance. Meanwhile, the territory of the Middle Dnieper (Kyiv region, Cherkasy region, Poltava region) is significant and differs in its performing traditions in its various villages, districts, cities. The folklore of Poltava region is characterized by a wide variety both in genre and in terms of performance.

Analysis of research and publications. Summarized information about ethnographers who studied the Poltava region at the turn of the XIX and XX centuries is contained in the source [1]. From the side of the musical life development of Poltava region in the same period it is worth noting the work [2]. The song folklore of the designated cultural and ethnographic area is presented in a thorough work [3], which was the main source of information for our exploration.

Highlighting previously unresolved parts of a common problem. Poltava, as a component of the Dnieper Ukraine, has been reflected in a number of scientific works of domestic scientists, both art and other fields. However, such an aspect as a concise and generalized analysis of specific folklore traits, genres, performance specificity is mainly concentrated in large-scale works. This complicates the understanding of the very essence of the folklore of the above-mentioned territory.

Formulation of the aims of the article. Brief analysis of specific features of song folklore of Poltava region and main stages of its development.

Presenting the main research material. The complex historical and political path of Poltava region is reflected in the cultural and artistic development of the region. Documented information about the cultural development of the Poltava region can be found in the written references of the engineer G. de Boplan (1648-1650) in the "Description of Ukraine or the regions of the Kingdom of Poland lying between the borders of Moscow and Transylvania" with additional information about the Ukrainians’ attitude, customs and military capability", which also describes calendario-lunch creativity and family-folklore of Ukrainians. Ethnographic mentions of a general descriptive nature are reflected in the writings of the famous traveler J. Güldenstadt, and later we find information in the travel notes of V. Zuiev. The above-mentioned facts about the cultural development and art of this region are general and descriptive.

The first detailed recorded information about folklore, in particular about its musical component occur-
ring in the XIX century, is reflected in three works by V. Miloradovich. The first, “Wedding songs in the Lubny district of Poltava province” is an attempt of meaningful systematization, which proceeds from the order of the wedding ritual. The second “Folk Rites and Songs of Lubny district” from a series of ethnographic works is a comparison of pagan and Christian worldviews of the local population and their combination, which was reflected in various festive activities. The third work “Life and Being of the Lubny Peasant” did not aim to describe the musical traditions, but in the chapters of the work there is a description of the musical traditions and songs.

Since the beginning of the XX century, the ethnographic information of the region has become more detailed and represents a new level of research. It is worth noting the works of F. Vovk “The Ukrainian nation in its past and present”, “Ethnographic peculiarities of the Ukrainian people”, which thoroughly investigate the folk traditions of the Ukrainian people, including Poltava region.

Detailed studies of song folklore of Poltava region with indication of the respondent, place of recording and peculiarities of performance begin in the XX century, in the postwar period. Such research has tremendous scientific value.

Thus, the researcher [7] distinguishes two types of distribution of song folklore performance in Poltava region: male songs and female songs. The male type outside the ritual singing of Poltava region includes ballads and historical songs, the authentic variants of cossack, chumak, orphan ballads in male performance are unanimous, it should be noted that later variants may have two or three voices.

The second type (female) performance includes songs from the lyrical sphere.

In a thorough work [3], which is a summary of research scientists IMFE of M. Rylskyi much of the study is devoted, also, to children's songs. Children's songs of Poltava region are performed both by children and adults (by family members). Such songs represent two spheres: non–ritual and ritual.

The sphere outside the ritual kind of folk songs—songs-entertainments— is performed by mom or dad while entertaining a child, as well as children's playful songs.

It is worth noting that the above genres from the female, male and children's repertoire, namely lullabies, songs–entertainments, varieties of male ballads—all belong to one-voice music.

According to the type of invoice, the song folklore of Poltava region should be divided into one-voice and many-voice songs, which in turn are divided into homophonic-harmonic and polyphonic type of presentation. Folk songs are performed both solo and in a group, it should be noted that band songs do not always have a polyphonic type of presentation, and there is also a subtle performance of the group songs. Solo performance is found in a minority of cases, and is mainly related to outside the ritual sphere of song folklore and to female performance (lullabies performed by a woman personally and which according to [8] are characterized by quiet dynamics and repetitive motif), lyrical songs-monologues. One-voice songs also include ceremonial lamentations [7], mostly performed by women.

Two-voice and three-voice songs are distinguished by polyphonic type. The two-voice songs have a typical Central Ukraine structure where the lower voice (mainly in female performance) is the base and the upper one is the sub-voice. Depending on the location, this type of output is called a tonchik or a horiak.

Here is a quote by O. Murzina, which fully reveals the peculiarities of the voice output characteristic of the Middle Dnieper region: “Voice output is a melodic decoration of the Dnieper songs (with spacious melodic moves overcoming the tightness of formulaic chants). Rising melodic strokes extend the sound range, and therefore intervals of tertiary or quartile above the upper main support are not uncommon in the output of the Dnieper songs” [5].

Poltava’s polyphonic songs mostly belong to non-ritual lyrics and female type of performance. As in most parts of the Middle Dnieper region, songs of homophonic harmonic composition and polyphonic composition stand out. Analysis of song folklore of Poltava region represented in fundamental work [3] allowed us to form an opinion about the prevalence of tertiary second, which sometimes increases to the interval of quarts or quintas in a considerable number of two-voice songs. Such a tertiary second is characteristic throughout the Middle Dnieper.

Songs of three voices in the same work are often a tertiary second with an octave duplication of melody, where the base (bass) and melody (sub-voice) form an octave, and the middle voice is produced by the tertiary above the base (bass). O. Murzina noted that: “The practice of mixed ensemble, characteristic of the Dnieper region, provides the sound completeness of the texture and helps to distinguish a clear bass line that is common for men and women” [5].

Thus, the three-voice songs are distinguished by a well-defined bass (lower voice, not necessarily male—more often female), middle voice, which performs the function of the main melody and the upper voice, which is a melismatic decoration of the main, middle voice.

Let us consider some expressive performance features of the song performance of Poltava region:

Conclusions from this study and perspective. The song folklore of Poltava region is characterized by genre and performance variety. However, despite the widespread distribution of songs in the male repertoire – it is the female repertoire, outside the ritual sphere of performance, it is best preserved and represents the most striking examples.
